# Topic Overview

- **Background**
- **Enterprise Mission/Purpose**
- **M&S Enterprise Management**
- **M&S Enterprise Engineering**
- **New Enterprise Approaches**
- **Summary**

**Purpose: Provide an Overview of MDA M&S Enterprise efforts**

# Increasing Complexity Requires a Paradigm Shift

***“The trend toward networked capabilities will increasingly demand movement away from acquisition of platforms in isolation and toward a more sophisticated consideration of how the Army should integrate systems into existing and future formations.”***

- ▶ **More preparatory system engineering is needed for such a large, ambitious program.**
- ▶ **Systems of Systems Engineering should have been much stronger early in the program.**

**“Lessons Learned from the Army’s Future Combat Systems”  
[RAND Corporation, 2012]**

# SoS Characteristics

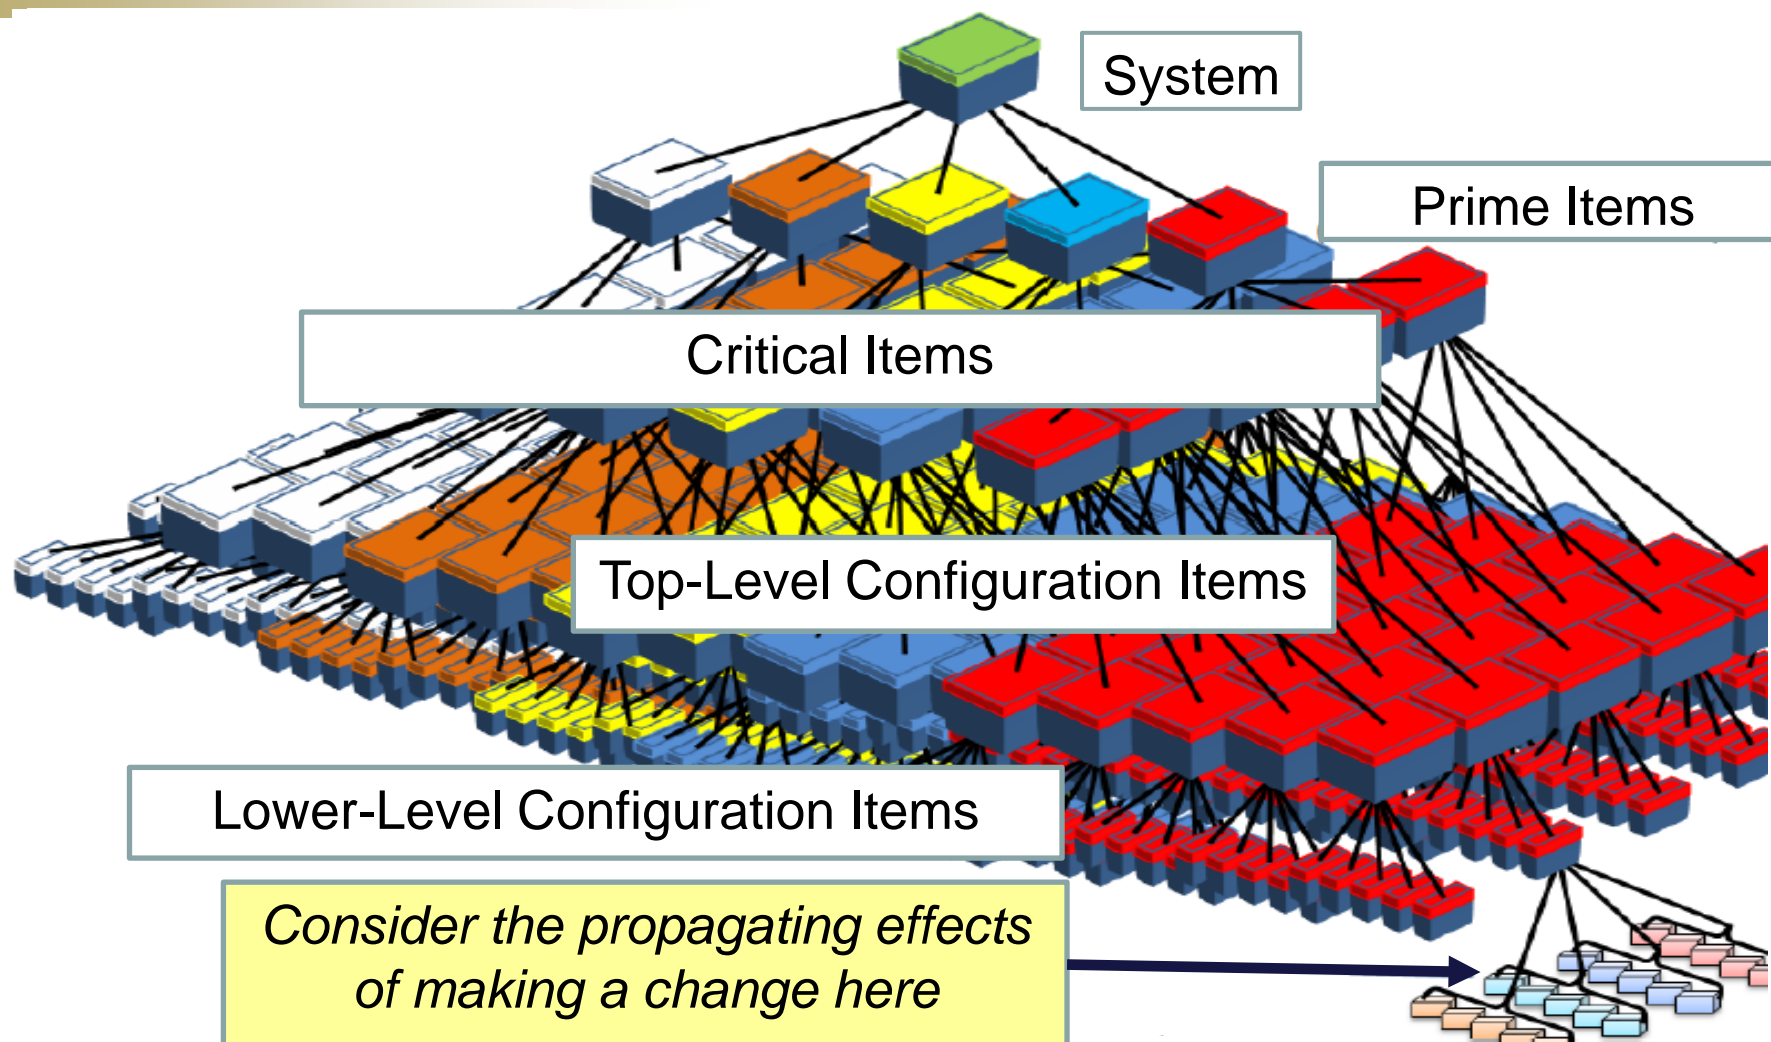

***A System is a “System of Systems” if it exhibits significant amounts of:***

- **Emergent behavior**
  - SoS performs functions not achievable by the independent component systems
- **Geographic distribution**
  - Geographic extent forces the elements to exchange information in a remote way
- **Evolutionary development**
  - Functions and purposes are added, removed and modified in an ongoing way
- **Operational independence**
  - Component systems have purpose even if detached
- **Managerial independence**
  - Component systems are developed and managed for their own purposes

**“Architecting Principles for SoS,” Mark Maier, 1998, *Systems Engineering* (INCOSE)**

# An SoS Model Representation

**As Complexity Grows Traditional SE Can Become Intractable**

# Systems of Systems Challenges Pain Points

- ***Lack of Systems of Systems Authorities & Funding***
- ***Leadership***
- ***Constituent Systems***
- ***Capabilities & Requirements***
- ***Autonomy, Interdependencies & Emergence***
- ***Testing, Validation & Learning***
- ***Systems of Systems Principles***

**“SoS Pain Points & Implication to MBSE”, Dr. Judith Dahmann, 2013**

# BMDS M&S Enterprise Mission/Purpose

***Establish and implement an enterprise-wide program management and engineering approach to ensure adequate resources and synchronized development and delivery of credible and timely BMDS M&S.***

**TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.**

U.S. ARMY  
**RDECOM**

# BMDS M&S Enterprise Vision & Goal

- **Design, develop and deliver credible and timely system-level and element/component-level M&S to support the BMDS Life Cycle**
  - **Decision quality data**
  - **Accredited for intended uses with acceptable limitations**
  - **Synchronized development, integration and delivery to better meet customer/user stakeholder needs**
  - **Efficient use of manpower, resources and facilities**
  - **Best value to the government to provide the most capability while minimizing cost and optimizing schedule**
  - **Complimentary suite of agency M&S products and capabilities to meet MDA Mission and BMDS Life Cycle Needs**
- **M&S Re-Architecture Goal**
  - **Address the long-standing M&S limitations**
    - **Initially identified in the Corrective Action Plan (CAP)**
    - **Incorporated as requirements in the M&S SRDs**
    - **Target system-level M&S that supports BMDS assessment**

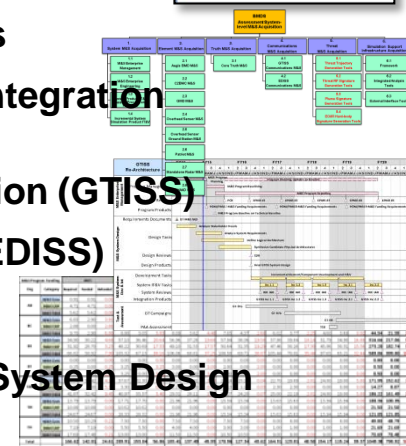

**TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.**

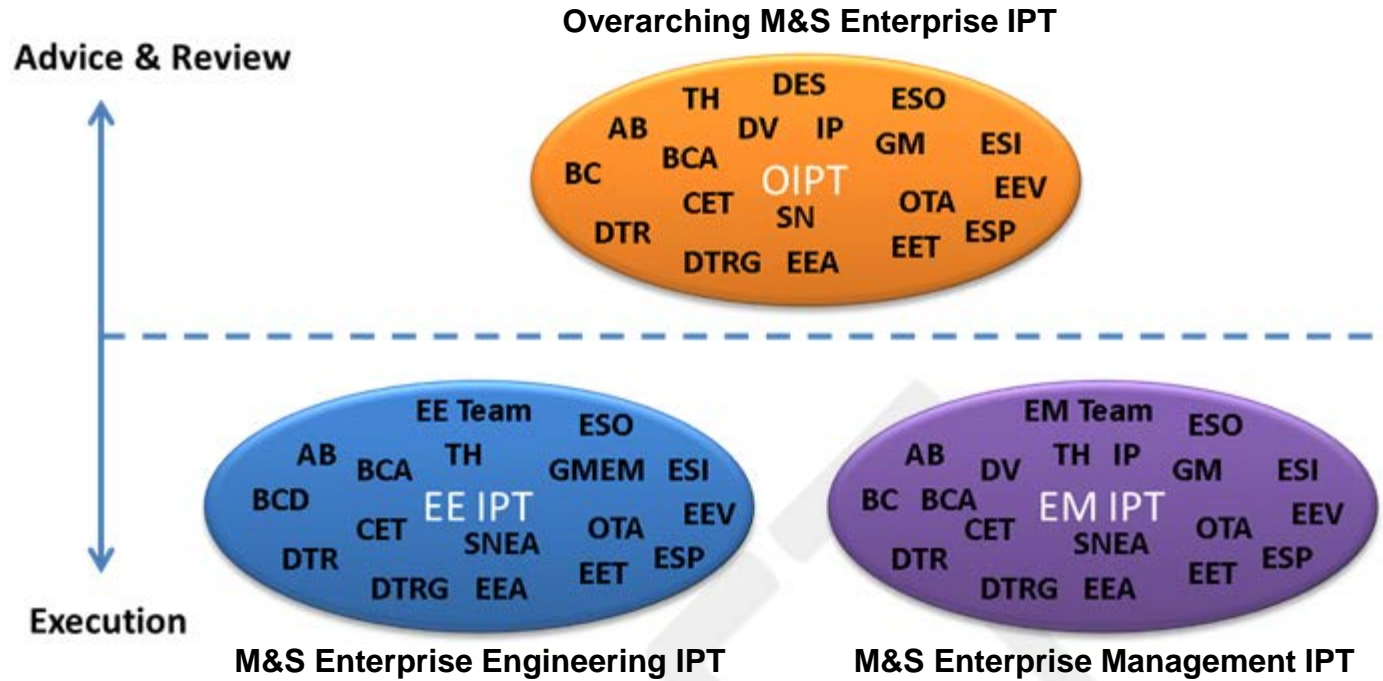

# BMDS M&S Enterprise Approach

- **M&S Governance Structure**
  - M&S Directive and M&S Management Instructions
- **M&S Systems Engineering Approach**
  - Independent M&S Requirements Document
  - Top Down Design based on independent M&S Requirements for system-level simulations
- **M&S Management Approach**
  - Leverages M&S Enterprise WBS, IMP/IMS for System-level Simulation Acquisition, M&S Program Baseline and Quarterly Program Management Reviews
- **Pre-planned, Synchronized Incremental M&S Capabilities**
  - Leverages system design to inform capabilities and dependencies
  - Leverages integrated planning to synchronize development and integration activities across the M&S Enterprise community
  - Product focused for Ground Test Integrated System-level Simulation (GTISS)
  - Product focused for End-to-end Digital System-level Simulation (EDISS)
- **System Product Integration, Test and Verification (pre-event)**
  - Verify implementation of the System-level simulation against the System Design and associated decomposed requirements

# Enterprise Integrated Product Teams (IPTs)

To be effective we must...

- 1) Get full M&S community participation
- 2) Avoid overtaxing community
- 3) Bring together proper technical expertise

**The right people to solve the right problems**

- **Centrally managed M&S SoS**
  - **Optimized/synchronized in quality, time, and resources**
  - **Strategically aligned**
  - **Cohesive Community**
  - **Credible system-level simulations**
- **Centralized monitoring/reporting of funding for all agency M&S**
  - **Includes System-level, Standalone Element and Other MDA M&S**

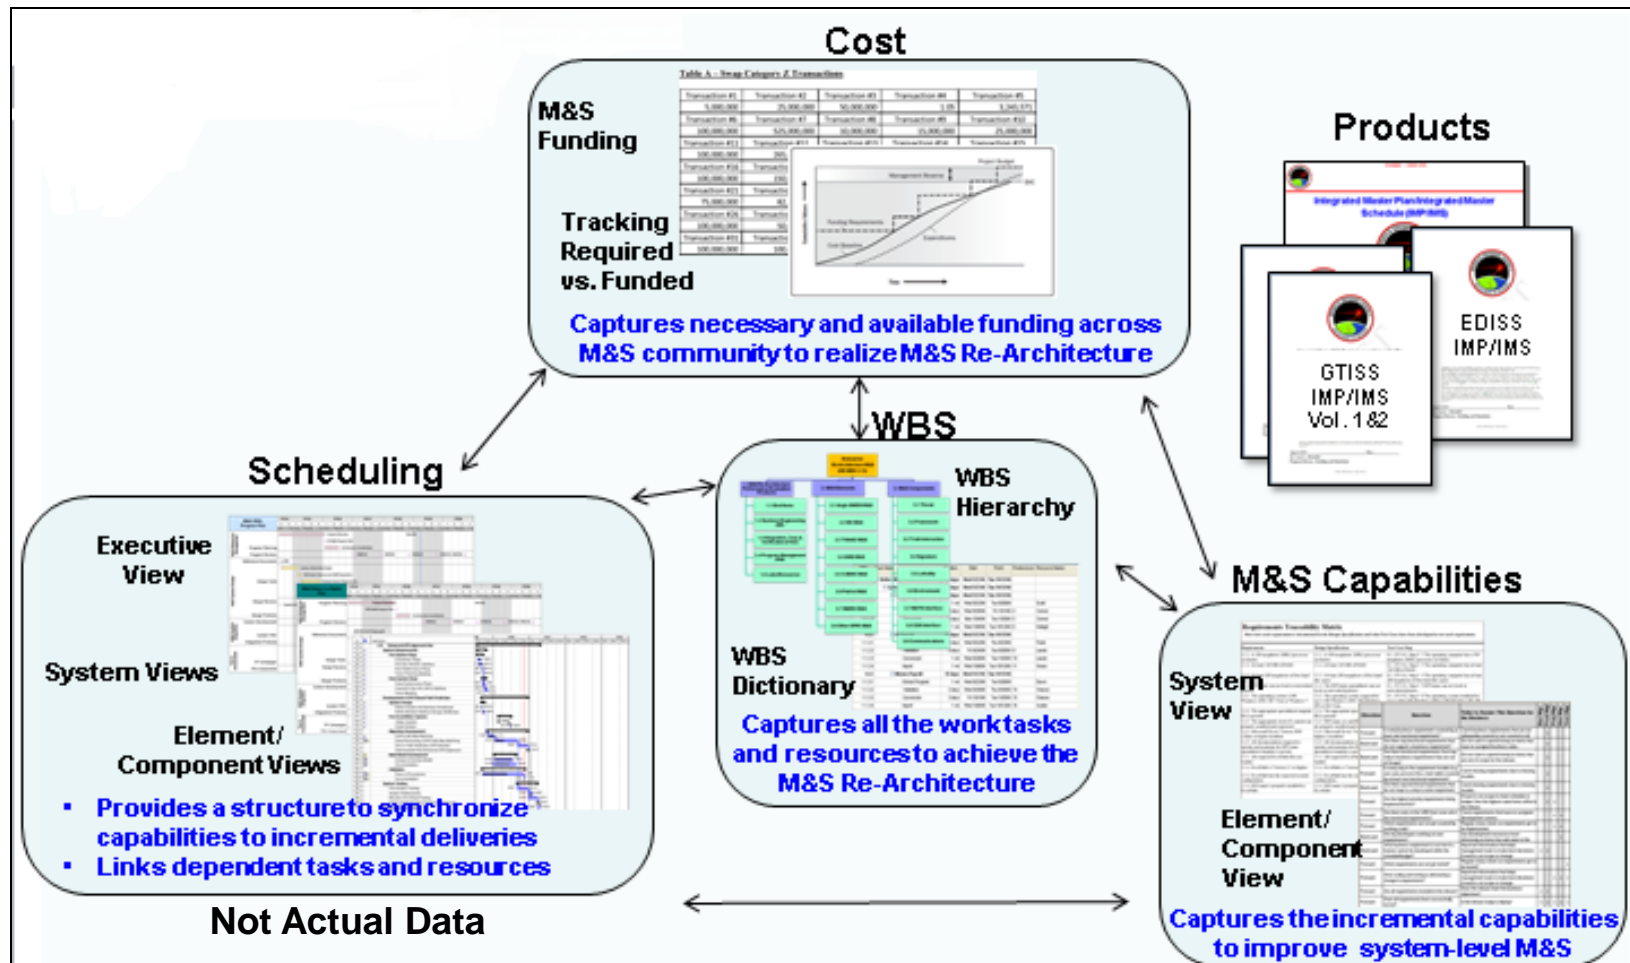

**Collaborative  
Planning to  
reach  
common goal**

**Synchronized  
Execution to  
reach  
common goal**

# IMP/IMS Concept

Create a master planning document that contains the details for Captures the Cost, Schedule, Performance planning across the SoS system-level simulations and the supporting M&S development and system integration

# M&S IMS Concept

# PMR Concept

**Where are we? How are we doing? How do we know?  
What do we need to do about it?**

**Quarterly Element/Component & System-Level PMRs  
Annual Executive PMRs**

# Enterprise Engineering

- **Purpose:**
  - Provides the system architecting and design for the system-level simulations, traceable to the System Requirements Document (SRD) and M&S Re-Architecture Vision
  - Facilitates a collaborative Integrated Product Team (IPT) approach to system design by working with engineering Subject Matter Experts across the M&S Element, Component, Threat and Stakeholder/User Community
- **Products:**
  - System Design for Ground Test Integrated System-level Simulation (GTISS) for the GT07 Campaign M&S
  - System Design for End-to-end Digital Integrated System-level Simulation (EDISS) M&S

***Model Based Systems Engineering (MBSE) is the formalized application of modeling to support system requirements, design, analysis, verification and validation activities beginning in the conceptual design phase and continuing throughout development and later life cycle phases.” [INCOSE, 2007]***

- The goal of the MBSE process is the creation of a well-reasoned and consistent *system model*.
- Focused on a shared system model with multiple views.
- Distinct from traditional systems engineering, which tends to be centered on a static, document-based approach in the form of design documents and text specifications.

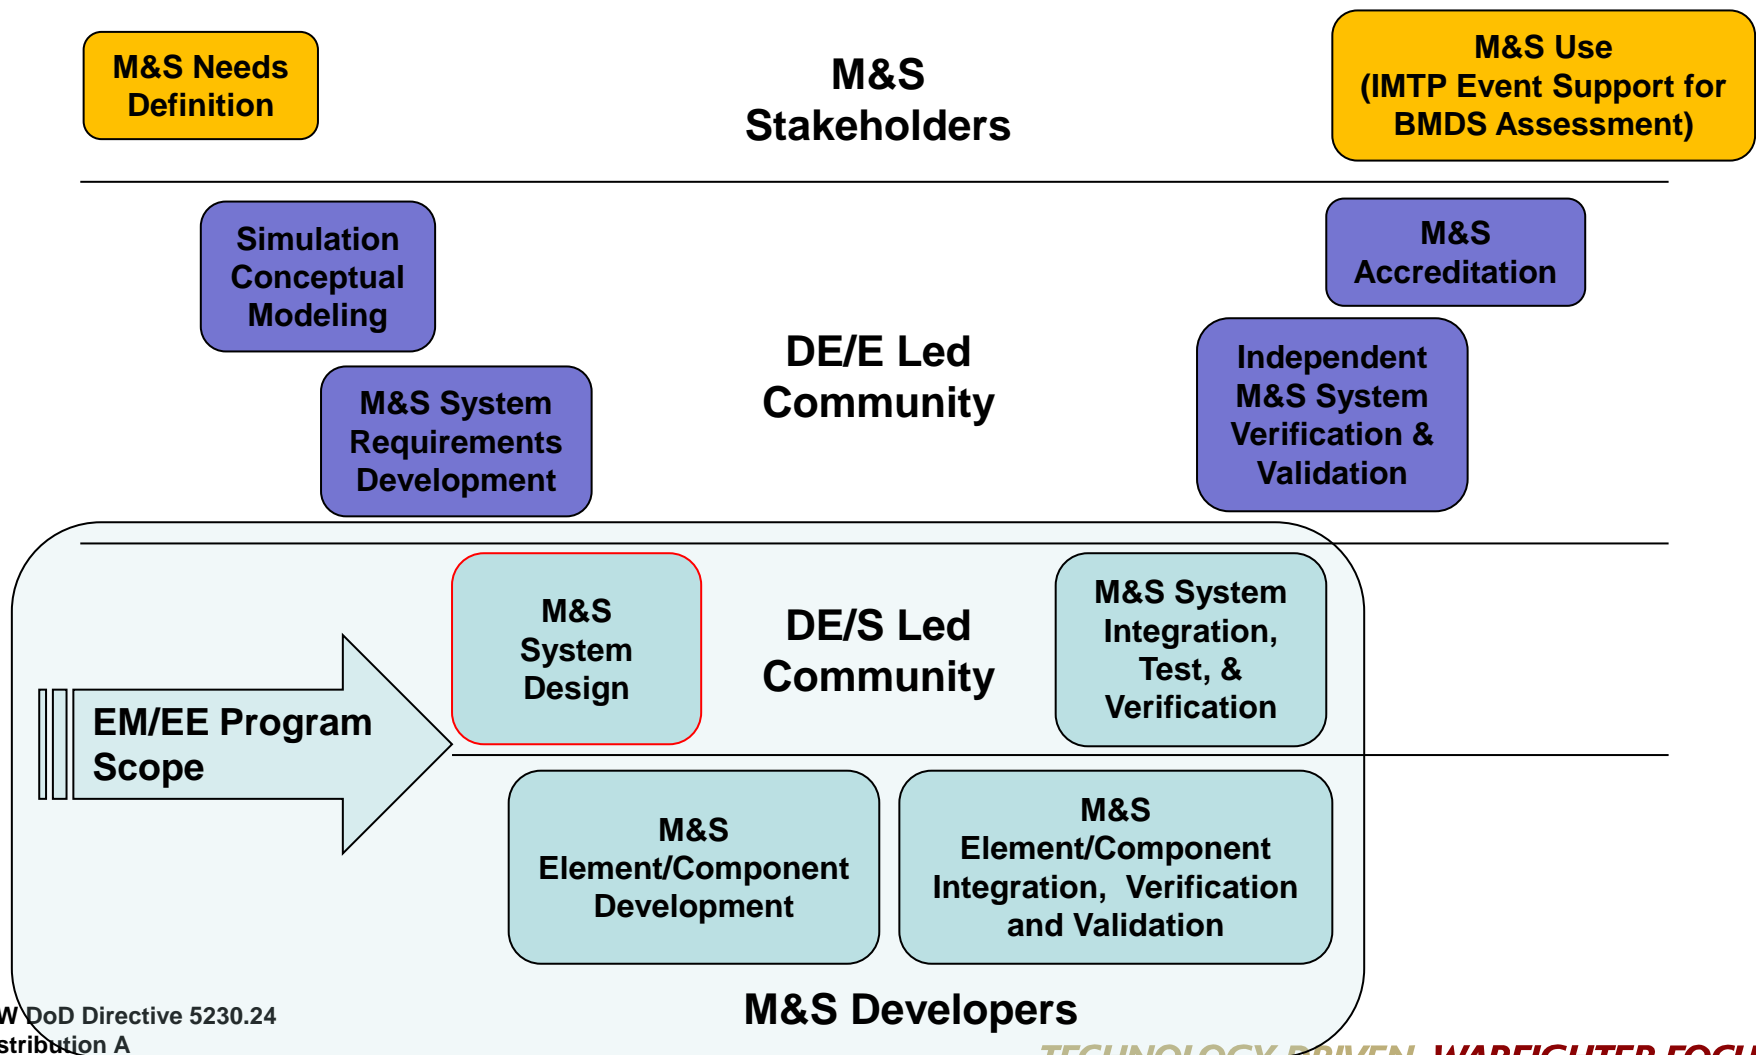

**Implementation using SysML as the Graphical Modeling Language**

**Incremental approach allows for the right balance of capability, schedule, and resources that provide increasing capability over time to stakeholders with the overall plan for the entire effort**

# Design Review Approach

- Implemented a content-driven sequence of design reviews corresponding to phases of the design process
- Used to evaluate the status, adequacy, and risk of the technical design
- Single system review methodology not easily supported in SoS context

**Following tailored design review methodology**

# New Enterprise M&S IT&V

- **Pre-planned, Synchronized Incremental M&S Capabilities**
  - Leverages system design to inform capabilities and dependencies
  - Leverages integrated planning to synchronize development and integration activities across the M&S Enterprise community
- **System Product Integration, Test and Verification (pre-event)**
  - Provide more opportunities to integrate early and often
  - Create informal and formal test and verification opportunities
  - Implement readiness and acceptance reviews
  - Verify implementation of the System-level simulation against the System Design and associated decomposed requirements
    - Focus on new incremental capabilities
    - Confirm verification/regression of cumulative existing capabilities
  - Continue to support event specific integration and certification activities

# Summary

- **The trend toward more complex systems that are inter-dependent to achieve systems-of-systems missions is on the increase.**
- **A well formed system model with community collaboration as part of the design and development process can help avoid the painful, unintended consequences often not discovered until during integration and event execution.**
- **Model Based Systems Engineering and enterprise like techniques offer an approach to address systems-of-systems challenges.**
